Emphasis on Confined Space Infographic

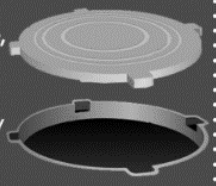

Requirements for Working Safely in CONFINED SPACES

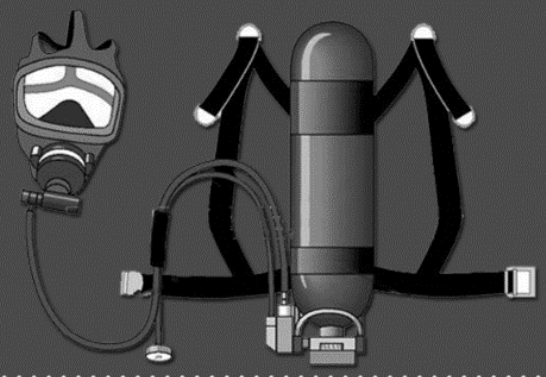

Confined spaces are one of the most dangerous work environments; therefore, it is vital that operatives in these areas are adequately trained and equipped with the advanced safety products.

Define confined space?

A "confined space" is any chamber, tank, manhole, vat, silo, pit, pipe, flue or any other enclosed space, in which:

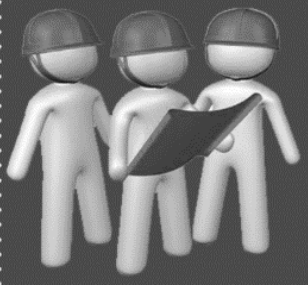

- The supply of air is inadequate,
- There is a risk of engulfment by material.

Work Safely In Confined Space

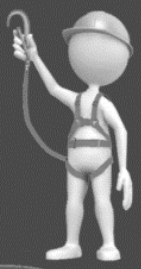

When any person enters or carries out any work in a confined space, the Employer and/or Principal shall comply with the regulations strictly.

Identification/Record /Information of all confined spaces at the workplace;

Evaluation of the need for entry into the confined space;

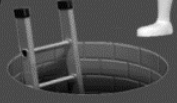

Safe means of access to and egress from the confined space;

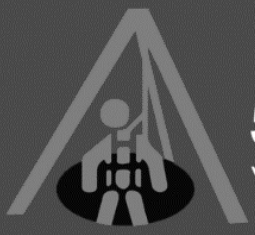

Safe practices for opening the entrance of a confined space;

Self-Contained Breathing Apparatus.

Confined Space Working Statistics

5 Million
Workers enter confined spaces each day.

259
Of those workers die, just under
1 death per day

15,900 Are injured in confined space accidents.

Health and safety training as well as equipment is required to protect the workers from potential accidents.
