## Five Reasons to Work Safe Today Stats & Facts

## **FACTS**

Here are 5 facts about workplace safety violations.

- 1. About a quarter of workplace injuries are due to overexertion.
- 2. Almost  $\frac{3}{4}$  of people who use drugs are employed.
- 3. Hazardous materials lead to 10% of skin cancers.
- 4. Workplace safety program reduce injuries by half.
- 5. Every day, 6000 people die due to workplace injury.

## **STATS**

- Injuries that are the result of pushing, lifting, pulling, carrying, and/or holding cost businesses a combined \$12.75 billion annually. That also amounts to more than 25% of costs related to workplace injuries.
- Falling on the same level (such as walking on a flat surface and tripping over one's feet) is the #2 cause of all disabling injuries. That incident costs employers almost \$8 billion annually.
- Out of the 7.2 million adults who used drugs way back in 2005, almost 13 million of them, or 74.8%, held either full or part-time jobs. Beyond that, some 10-20% of people who die while working for their employer test positive for either alcohol or illegal drugs.
- Hazardous materials kill almost 440,000 employees annually, according to the International Labour Organization. That organization also says that 10% of reported skin cancers are caused by workplace exposure to hazardous materials.
- If you own a business that doesn't have a workplace safety program in place, be advised that you can reduce injuries by 50% if you add one, according to the American Society of Safety Engineers.
- On an average day, about 6,000 people will die because of workplace-related diseases or accidents, according to the International Labour Organization. That amounts more than 2 million workplace deaths annually. About five times as many people die from workplace related illness than die because of an accident on the job.
