

# Heat Stress – Picture This – Spanish

## PROTECT YOUR WORKERS FROM HEAT STRESS

### Develop an acclimatization plan

Acclimatization is the result of beneficial physiological adaptations (e.g., increased sweating efficiency and stabilization of the circulatory) that occur after gradual increased exposure to a hot environment.

**TIP 1**  
Gradually increase the time spent in hot environmental conditions over a 7-14 day period.

**TIP 2**  
For new workers, the schedule should be no more than 20% exposure to heat on day 1 and an increase of no more than 20% exposure on each additional day.

**TIP 3**  
For workers who have had previous experience with the job, the acclimatization schedule should be no more than:

DAY 1	DAY 2	DAY 3	DAY 4
50% breaks	60% breaks	80% breaks	100% breaks

### Set up a buddy system

Check your workers routinely to make sure...

- they make use of readily available water and shade.
- they don't have heat-related symptoms.

### Schedule and encourage frequent rest breaks...

...with water breaks in shaded or air-conditioned recovery areas.

### Emphasize the need for appropriate clothing

Encourage workers to wear clothing that is...

Cotton clothing can be soaked in water to aid cooling.

### Encourage workers to drink plenty of fluids...

...such as drinking small amounts of water before becoming thirsty.

During moderate activity in moderately hot conditions, workers should drink about...
