Lifting – Landscaping Fatality File

Fatal Lifting Incident in Landscaping

On July 14, 2023, a fatal lifting accident occurred during a landscaping project in Austin, Texas, resulting in the death of a 37-year-old worker, Michael Thompson. Thompson was lifting a heavy stone slab as part of a patio installation when he experienced severe back strain, causing him to collapse. The weight of the slab resulted in internal injuries that proved fatal.

The investigation revealed that Thompson was not using proper lifting techniques and was working alone without any mechanical lifting aids or assistance from coworkers. Additionally, there were no proper ergonomic training sessions conducted by the employer, and no safety protocols in place for handling heavy materials.

Following this incident, the landscaping company has enforced stricter safety measures, including mandatory ergonomic training for all employees, utilization of mechanical lifting devices for heavy objects, and ensuring that lifting tasks are conducted by teams rather than individuals to prevent overexertion and injuries.

This tragic event underscores the critical importance of proper lifting techniques, ergonomic safety training, and the use of appropriate equipment to prevent similar incidents in the future, enhancing overall workplace safety in the landscaping industry.
