# Leading Edges in Fall Protection

**Date**: May 3, 2022

**Time**: 10:00AM PDT/ 1:00PM EDT

**Register Here**

This webinar will discuss some of the challenges and solutions associated with leading edge and sharp edge applications in the construction industry. Newer leading edge SRLs enable users to tie off at their feet in situations where there is no anchor available above the user's head. However, many sharp edges exist on construction sites which can cause extreme danger to the SRL in the event of a fall over a sharp edge. This webinar will share how leading edge SRLs are designed to protect the user and the lifeline itself, including the use of energy absorbers to enable an SRL to arrest the fall without damage or failure.
