Hand and Power Tools

Cuts and other hand injuries to the hands are one of the most frequent and common injuries workers face. Hand injuries, including amputations, can keep workers away from the job for several days and can cost employers big money. But they are a preventable and avoidable risk to employees and cost to employers.

Step 1: Tool Assessment

Take stock of the types of tasks, jobs, and operations that require the use of hand or power tools. Are these available and in good working condition? Are workers using the right tools for the work they are performing? Do they need a different tool?
